

Appendix B
INFORMATION MANAGEMENT

The control of information on the battlefield is a key to successful military operations. The M93A1 FOX provides the commander near real-time information on battlefield hazards.

The digitization of battlefield information requires collecting, disseminating, and managing information to enhance battle command. The M93A1 FOX serves as the collector of NBC hazard information. The combat radio net (CRN) using SINCGARS serves as the means of disseminating the information from the FOX. To manage the information, the automated NBC information system (ANBACIS) is used. ANBACIS is part of the maneuver control system.

The FOX commander's display (FCD) provides the vehicle commander with displays on NBC status, NBC messages, reports, and free text. The FCD provides report templates for:

- NBC 1 - Biological or Chemical.
- NBC 1 - Nuclear.
- NBC 4 - Biological or Chemical.
- NBC 4 - Nuclear.
